

4 Reasons You May Get A Computer Virus

The world was given a crash course on how viruses spread when the novel coronavirus COVID-19 rapidly moved across the world in 2020. Biological viruses easily can spread from person to person, but computers can be afflicted by their own types of viruses that also can spread quickly.

Stopping computer viruses involves becoming familiar with just what they are and where viruses originate.

According to Malwarebytes, a cybersecurity company, a computer virus requires a host program. It then requires user action to transmit that virus from one system to another. At that point, the virus attaches a bit of its own malicious code to other files or replaces files outright with copies of itself.

While viruses and malware tend to be grouped together, some forms of malware, like computer worms, are able to spread across systems and networks on their own. That can make them even more dangerous and widespread. Computer viruses do not generate naturally. They need to be created by programmers. These programmers may do so to steal victims' identities, to get around restricted data, for bragging rites, or to damage organizations or competing businesses. A virus, for example, may sit undetected on your computer monitoring online usage, recording credit card information, passwords or identity information, advises Interworks, a technology company.

Most of the time viruses make entry to your computer or other device through attachments or links. Here are four common places viruses and malware lie in wait.

1. **Downloaded purchases:** Downloading software, games, files, and other technology from the internet is not without risk. There are many reputable sites, but unknown downloads may carry viruses.
2. **Network links:** More than one device hooked up to a network means any computer on that network is vulnerable should one device pick up a virus. All connected computers can be compromised by one virus.
3. **Email attachments:** Computer How To Guide states that emails are one of the most common ways viruses are downloaded onto computers. Opening an email from someone you don't know can trigger malware or a virus. Never click on a link or open an attachment from an unknown sender.
4. **Messaging apps:** Apps that enable people to communicate through chat on desktop or mobile systems can be spreaders of viruses, too. Do not visit links posted in messaging applications unless you are sure they are from safe sites. Sometimes messenger services can be hacked, so even if links come from relatives or friends, verify those links before clicking on them.

New viruses are being created daily and computers need protection. Good anti-virus programs can help, but computer users also need to do their part to avoid contracting viruses.

Legal Notice – CT Certificate Of Need.
SISU Integrated Health, LLC is applying for a certificate of need pursuant to § 19a-436 of the Connecticut General Statutes. SISU Integrated Health, LLC will function as a private out-of-network facility for the care or treatment of substance abuse and dependence and psychiatric outpatient services for adults. The project is to be located at 208 Sausagatuck Ave Westport, CT 06886. The total capital expenditure of the proposal is \$352,400.00.

LEGAL NOTICE OF HEARING

Notice is hereby given that the Westport Planning and Zoning Commission will hold a Remote Public Hearing on Monday, March 04, 2024, at 7:00 P.M.
The public may attend using the link to be published on the agenda prior to the meeting. The meeting agenda will be available at www.westportct.gov on the "Meeting List and Calendar" web page one week prior to the meeting.

1. Text Amendment #841: #PZ-24-00010 submitted Atty. Enrico R. Costantini to modify §32-18.1(c) of the Zoning Regulations to require the Historic District Commission (HDC) or their designee shall apply the Secretary of the Interior's Standards for determining eligibility of a Historic Residential Structure to modify §32-18.5(d) to authorize the Planning and Zoning Commission the discretion to allow certain properties located in the Residence A Zone, less than one (1) acre in size, not including those in a Historic District regulated by the HDC, to be subdivided provided that the property contains a Historic Residential Structure that is at least 100 years old as of March 1, 2024, and the development on the new lot will not exceed the Total Coverage or Building Coverage that would otherwise be permitted under the Zoning Regulations. As proposed, any lot created under the proposed text amendment that does not contain a Historic Structure shall not be subject to the preservation requirements of §32-18. All lots created shall be at least 6,000 square feet in lot area. The amendment to §32-18.5(d) also adds language that provides that the age of a structure shall be determined by a date reasonably ascertained from available physical or documentary evidence. Changes to §32-18.5(e) are proposed to replace language describing how to determine the age of an eligible Historic Residential Structure to be consistent with changes proposed in §32-18.5(d), and to provide clarifying language referencing the Commission's authority under the Zoning Regulations. A copy may also be viewed at Town Hall, 110 Myrtle Ave., in the Town Clerk's Office and Planning & Zoning Office.

Dated at Westport, CT on the 22nd day of February 2024 and the 29th day of February 2024, Paul Lebowitz, Chair, P&Z Commission

Genealogy fascinates much of the general public. The number of people learning more about their families and heritage through genealogy increases year to year. According to FamilyTree.com, genealogy is the second only to gardening as the most popular hobby in the United States.

People explore genealogy for many reasons, including learning about their ancestry. A rundown of the basics of genealogy can make such pursuits more enjoyable.

Genealogy and family history are subtly different. Genealogy is a line of descent traced continuously from an ancestor, while family history is defined as the history or narrative of a family. They are intertwined but not synonymous.

Vital records are key

Genealogists explore vital records to obtain information about their ancestors. Vital records include documentation of ancestors' life events, including births, deaths, marriages, and more. Civil registration began at different times around the world, and even across North America, so it's often challenging, though entirely possible, to develop an accurate history.

Surnames may be different

Surnames were not commonplace until around the eleventh century in Europe, according to S.C. Perkins, who is the author of a mystery series featuring a Texas genealogist as the protagonist. Surnames fall into four general categories:

1. Place or geographical features (i.e., "Hill")
2. Nicknames or appearance ("Little")
3. Occupation ("Baker")
4. Father's name ("Peterson")

Some names may not have been recorded correctly, so a person's last name actually may be a derivative of the real name or a misspelling. Often immigrants changed their own surnames to make them sound more American or more native to wherever they were emigrating to.

Cities change

Discovering records of ancestors can be even more challenging because of shifting borders or municipalities, which change over time. The Family Tree Factbook provides European maps from throughout history and a timeline of European border changes that can help with research.

Preserve family history

In addition to uncovering mysteries of one's heritage, dabbling in genealogy helps to preserve family history by confirming tales and tracing ancestors' journeys. It also may help shed light on the history of artifacts or jewelry that ancestors owned and passed down.

Connect with others

A motivator behind genealogy research is to uncover relatives. Cousins from all over the world can discover they are related and bridge the gap between them through shared genetics and history. This may be particularly important to those who were adopted and hope to understand more about where they came from for personal or health-related reasons.

Genealogy is a growing hobby that can be quite rewarding. Thanks to the internet and growing databases of civil records, it's now easier than ever to trace family histories.

Did You Know?

According to the National Sleep Foundation, certain foods may help people fall asleep faster and sleep more soundly while others may compromise a person's ability to enjoy a restful night's sleep. In lieu of white bread, refined pastas and sugar-laden baked goods, all of which can reduce serotonin levels, the NSF recommends whole grains. The buildup of serotonin in the brain during periods of wakefulness can contribute to the onset of sleep later in the day. If serotonin levels in their brains are disturbed, then people may experience difficulty falling asleep. The NSF also recommends almonds and walnuts, which contain melatonin, a hormone that helps to regulate the sleep/wake cycles. In addition, foods that are high in lean protein that contain the amino acid tryptophan also may increase the production of serotonin, potentially contributing to a restful night's sleep.

4 Reasons You May Get A Computer Virus

The world was given a crash course on how viruses spread when the novel coronavirus COVID-19 rapidly moved across the world in 2020. Biological viruses easily can spread from person to person, but computers can be afflicted by their own types of viruses that also can spread quickly.

Stopping computer viruses involves becoming familiar with just what they are and where viruses originate.

According to Malwarebytes, a cybersecurity company, a computer virus requires a host program. It then requires user action to transmit that virus from one system to another. At that point, the virus attaches a bit of its own malicious code to other files or replaces files outright with copies of itself.

While viruses and malware tend to be grouped together, some forms of malware, like computer worms, are able to spread across systems and networks on their own. Any other business proper to come before the Board.

Dated at Norwalk, Connecticut, February 22, 2024
 ATTESTED:.....
 Irene Dixon, City Clerk

ADVERTORIAL

Tire maintenance a key component of spring check-up

When warm weather arrives, many people enjoy a collective sigh of relief. Just as people welcome the end of the cold, snow and ice, cars and trucks also can benefit from more moderate temperatures.

Salt, grime and pot holes can take a toll on tires over the course of a typical winter. Drivers will not get far this spring and summer without tires in good repair, which is why tire maintenance should be part of any seasonal repair checklist.

■ Tire rotation/realignment
 Examine the tires for tread wear. Any uneven or abnormal tread wear could indicate that the tires need to be rotated and the wheels realigned at the very least. Take the vehicle to a qualified mechanic to get their opinion on how to remedy the situation. Mechanics may recommend rotating tires every 6,000 to 8,000 miles, or about every six months for the average driver.

Wheel realignment may be necessary after a season of driving over potholes and other irregularities in the road. Misaligned wheels can cause handling problems, like the car "pulling" to one side.

■ Tire replacement
 Drivers may discover extreme tread wear, bulges or even cracks in the sidewall during a tire inspection. These signs indicate that it's time to replace the tires. Failing to replace old, worn down tires can increase the risk of automobile accidents.

■ Thorough cleaning
 Once tires are inspected and possibly serviced or replaced, treat the car or truck to a washing and thorough detailing. This will help tires shine and get the vehicle road-ready for spring trips.
